I. The 2020_2021 wintering campaign

I.1. Financing of agricultural production:

Credit committees (1^{er} and 2th) of La Banque Agricole (North Zone) met, the volume of credit retained for the Financing of the Agricultural Production (FPA) of the winter season 2020_2021, is evaluated for an amount of **5.626 billion CFA francs** corresponding to a area equal to **18,468 hectares** (Source: LBA / ZONE-NORD, August 2020). The table below summarizes the overall summary of the results of the two credit committees.

Table 1: Summary of the results of the credit committees of LBA / North Zone of wintering 2020/2021

Source: LBA / Zone Nord, August 2020.

In Dagana, the credit committees (1^{er} and 2th) of La Banque Agricole (North Zone) met, the volume of credit retained for the financing of the agricultural production of the rainy season 2020_2021 for the delegation, is evaluated at **3, 604 billion F CFA** corresponding to an area equal to **9,643.48 ha**

In Podor, the credit committees have decided to grant an amount of **1, 105 billion Fcfa** for the 2020/2021 wintering credit, corresponding to an area of **3,620 ha**.

In Matam, there is a decrease of 1,701 ha in the areas selected by the LBA committees compared to the wintering campaign. 2019/2020. The volume of credit retained for this campaign is estimated at approximately **355 million** corresponding to **1,846 ha**.

I.2. Development forecasts (An3 LM12)

The cultivation objectives are estimated at **46,130 hectares** including 40,000 ha reserved for rice cultivation, or 87%.

SAED BP. 74, Km10 Route de Rosso - Saint-Louis - Tel: 33 938 22 00 - Fax: 33 938 22 01 - E-mail: saed@saed.sn or saed@orange.sn

In Dagana, **11,645 ha** are shaped, i.e. 51% of forecasts against **13,299 ha** on the same date in HIV 2019/2020, i.e. a decrease of 1 654 ha.

In Bakel, the development reports **291.87 ha** including 141.54 ha in rice, or 21% of the development forecast.

These delays noted at the level of offsets and sowing are mainly due to the difficulties of harvests, to the early rains caused during the month of July. Harvest / threshing operations for SSC 2020 continue, along with offsets and winter sowing 2020/2021.

The introduction of inputs is taking place gradually at the level of all the delegations. The 1st urea intake is underway to be carried out on rice as well as corn in all production zones.

In Podor, the placement rate is 94% for urea and 59.6% for DAP at the various drop points. The rate of Sale to date is estimated at 39.2% for urea and 45.9% for DAP.

In Bakel, the installation of urea (15 T of the CSS 2020 remainder) for wintering is still awaited.

In Matam, the placement rate is currently 72% for DAP, 99% for urea and 79% for triple 15.

disposals are respectively 34% for the DAP, 53% for Urea and 0% for the triple 15 (Source: DRDR, situation on 1 September).

Grassing problems have been reported in several adductors. This is the case of Gorom downstream (Emergency at the level of 3PRD socket), Lampsar downstream, Kassack downstream and the Bango reserve where there is a strong proliferation of aquatic plants. Dispositions must be taken urgently for the maintenance and reinforcement of pumping at the level of the various stations during this campaign wintering.

II. The Hot Dry Season 2020:

II.1 Financing of agricultural production:

LBA Zone Nord credit committees (1^{er} and 2th) met, based on expressed needs of the order of **10.374 Billion F CFA** (equivalent to **27,066 ha**), the financing program selected by La Banque Agricole for the 2020 Hot Dry Season is **8.951 billion CFA francs** corresponding to an area of **23,975 hectares** (Source: LBA / Zone Nord, 2020).

In Bakel, the program adopted by La Banque Agricole to finance production is **1 425 388 F CFA** corresponding to an area of **six (06) ha** (Source: LBA / Zone Est, 2020).

Out of 14 files filed with the Matam CMS for an amount of **50 614 207 F CFA** corresponding to an area evaluated at **255.70 ha**, all are retained, i.e. a rate of 100% of the requests received (Source: Weekly Tracking, Matam Delegation).

II.2. Development forecasts (An3 LM12)

The development forecasts for SSC 2020, for the third year of implementation of LM12, are revised downwards and, they on 54,815 hectares of which 91% (50,000 ha) reserved for rice cultivation.

Table 3: Development forecasts and achievements for the Hot Dry Season 2020

Source: Weekly Tracking, SAED Delegations, SSC 2020.

Harvesting operations are being finalized throughout the Left Bank of the Senegal River.

In Dagana, we note disasters of **77 ha** at the level of 3PRD and dropouts of about **8 ha** at Pont Gendarme.

In addition, with reference to the situation of the development of the hot season 2019 at the same period, we note an overrun of **3,384 ha** rice enhancement for this Hot Dry Season 2020 campaign.

However, constraints of unavailability of combine harvesters are reported, but also the high cost combined with the scarcity of labor for harvesting operations thus causing the late release of plots cultivated in SSC 2020 and intrinsically difficulties in respecting the crop calendar for the 2020/2021 rainy season.

III. The Cold Dry Season 2019_2020:

III.1. Financing of agricultural production:

1^{er} La Banque Agricole's credit committee (LBA / North Zone) met from 02 to 04 October 2019 in Matam, and the financing selected, for this Cold Dry Season 2019-2020 campaign, concerns an amount of **2.124 billion CFA francs**, corresponding to a area of **2,244 hectares (Source: LBA / Zone Nord, 2019)**.

The LBA credit committee (EST network) met on October 10, 2019 and the funding selected relates to an amount estimated at **11 714 862 F CFA**, that is to say an area equal to **23.62 ha** (LBA-East Zone).

In addition, the CMS regional committee met on November 5 and decided to finance the Kollangal locker up to **5,251,024 FCFA**, i.e. an area of **10.28 ha** for the Onion speculation (*Weekly Monitoring Nov-19, Bakel Delegation*)

III.2. Development forecasts and achievements (Year2 LM12):

Forecasts remain dominated by onion, industrial tomato and corn with respectively 41%, 20% and 17% of the objectives of enhancement revised.

Table 4: Development forecasts and achievements for the Cold Dry Season 2019_2020
